Corrective release, October 2026: completion report

Branch `claude/culinaryvault-corrective-release`, four commits on top of `main` at `375249b1` (PR #15). Starting point tagged `checkpoint/pre-corrective-2026-10-18`. Not merged and not deployed: this release had no deployment authorisation of its own (section 9 below).

Status words used throughout:

- **Implemented**: in the source and the generated site on the branch.
- **Tested locally**: checked by a script or a browser in the build environment.
- **Verified live**: checked on weeklydelight.com.
- **Awaiting external confirmation**: needs the owner, a specialist or a real cook.

Nothing in this release is verified live yet, because nothing has been deployed.

1. Verified fixes

Area	What was wrong	What changed	Status
Macarons	75 minutes total, with 30–60 min shell rest, cooling, ganache chilling and 24 h mandatory maturing left out. 50 ml water left over from the Italian-meringue method; the method is French meringue, so the water had no use. Egg whites aged at room temperature.	Water removed, with the reason recorded. Whites refrigerated, used within 2 days, out no more than 2 hours (USDA FSIS). Ganache made while the shells rest. The total counts rest and maturing: about 25 h 45 min to 26 h 15 min.	Implemented, tested locally
Lasagna Bolognese	3 h 15 min total and 2 h 30 min cook, against a method of 4 + 12 + 10 + 5 + 20 min, a 2½–3 h simmer, 40 min baking and a required 20 min rest	Cook 241–271 min (new optional `cookMax`), plus the rest: 5 h 6 min to 5 h 36 min start to finish. Masthead, FAQ, description, meta and JSON-LD agree. Besciamella and oven heating overlap the simmer, a reviewed override records why.	Implemented, tested locally
Recipe consistency	No check that the method, the times and the claims agree	`tools/recipe-consistency.js`, part of `npm run check`. Reports confirmed / review / accepted exception, and fails on confirmed only.	Implemented, tested locally
Recipe times	23 confirmed defects at first, more on reading the review list	35 recipes corrected (cook times, ranges, waits, time claims). 4 reviewed exceptions recorded with reasons. 0 confirmed findings remain.	Implemented, tested locally
Food handling	Marinating on the counter, raw meat and egg-rich bakes out for over 2 hours, slow cooling of joints	13 recipes corrected, plus macarons. Raw-egg dishes listed for a specialist (`food-handling-review.md`).	Implemented; specialist list awaiting external confirmation
Search index	5.83 MB; carried the generated long tail and every quantity	2.97 MB raw, 496 KB brotli. Accent, punctuation and hyphen folding. Relevance-only ranking. Loading, failed and empty states kept apart.	Implemented, tested locally

Area	What was wrong	What changed	Status
Ratings	"Not yet rated" printed on every card, header and painted card	Removed; stars appear only from real reviews. Private notes stay labelled as the visitor's own. Search ranking no longer adds the rating field.	Implemented, tested locally
Homepage	"Twenty-nine kitchens" (92 cuisines listed), "The most recent recipes to come out of testing", "New this week", "What we have been cooking", "the world's most famous recipes"	Replaced with true statements. Each recipe appears once on the homepage; the gallery shows photographs only.	Implemented, tested locally
"Newest first"	The newsletter block said the recipe index is sorted newest first; it opens in "Suggested order"	Block replaced with Saved recipes, the index with the newest first, and the ingredient pages	Implemented, tested locally
Sodium	Carbonara 2,710 mg, from counting all the pasta-water salt. 28 tier-1 recipes published such figures in JSON-LD.	"Sodium: not given" with the reason; dropped from JSON-LD. Unmeasured salt is labelled as a floor. Two tips quoting unsourced sodium figures reworded.	Implemented, tested locally
Testing register	Nothing to record a real cook	`src/data/testing-notes.json`: 26 recipes, empty fields, not published	Implemented; awaiting a cook
Tap targets	Footer links 17 px tall	24 px (WCAG 2.2, 2.5.8)	Implemented, tested locally

2. Files changed

- **Source:**
  - `src/build.js`: `cookMax`, search words, index fields, `sodiumStatus`.
  - `src/lib/timing.js`: "mature" is now read as a wait.
  - `src/lib/util.js` and `src/lib/faq.js`: ranges, plurals, no unrated label.
  - `src/templates/recipe-page.js`, `layout.js`, `pages.js`.
  - `src/assets/js/app.js` and `directory.js`.
  - `src/assets/css/main.css`.
- **Data:**
  - `src/data/catalog*.js`: the cook times of 26 recipes.
  - `src/data/details*/…`: 49 recipes.
  - `src/data/timing-overrides.json`: 5 reviewed overrides.
  - New: `src/data/consistency-reviewed.json` and `src/data/testing-notes.json`.
- **Tools:**
  - New: `tools/recipe-consistency.js` and `tools/ads-unchanged.js`.
  - `tools/check.js`: new regressions.
  - `tools/nutrition-audit.js`: sodium in prose.
- **Docs:**
  - `CLAUDE.md`: new field, tools, testing register, food handling.
  - `README.md`: counts.
  - This folder: the report, `consistency-review.md` and `food-handling-review.md`.
- **Generated:** the site at the repository root, rebuilt.

3. Before and after

Page	Before (main)	After
Macarons JSON-LD	`PT1H / PT15M / PT1H15M`	`PT1H / PT15M / PT25H45M`
Macarons header	"1 hr 15 min total"	"1 hr 15 min prep and cooking · plus 24 hr 30 min to 25 hr resting and maturing · 25 hr 45 min to 26 hr 15 min start to finish"
Lasagna JSON-LD	`PT45M / PT2H30M / PT3H15M`	`PT45M / PT4H1M / PT5H6M`
Lasagna header	"3 hr 15 min total"	"4 hr 46 min to 5 hr 16 min prep and cooking · plus 20 min resting · 5 hr 6 min to 5 hr 36 min start to finish"
Carbonara nutrition	"2710mg Sodium"	"– Sodium: not given", with the reason in the note
Cacio e pepe JSON-LD	`"sodiumContent":"3190 mg"`	no sodiumContent
Hachis parmentier	cook 45 min against 8 + 10 + 3 + 150 + 45 min of stages	cook 216 min
Chili con carne	8 h "chilling" counted from "or better, … refrigerate overnight"	20 min required rest; cook 181 min
Every card and recipe header	"Not yet rated"	nothing until a real review exists
Homepage	"Twenty-nine kitchens, one kitchen table"	"92 cuisines, one table"

4. Search measurements (tested locally)

	Before	After
`search-index.json` raw	5,826,920 B	2,965,810 B
gzip (level 6)	1,026,326 B	678,634 B
brotli (quality 11)	719,315 B	496,004 B
JSON.parse in Node, best of 5	29.2 ms	16.6 ms
Loaded on page load	no (on first search)	no (on first search)
Network failure shown as	"No recipes match"	"Search could not load the recipe list…", with a retry; the directory keeps its server-rendered cards

Live (from the baseline, before this release): brotli is served, `Cache-Control: max-age=3600`, and an ETag is present. The client now fetches with `cache: 'no-cache'`, so the browser revalidates against the ETag and sees a new build at once.

Queries, in Chromium against the built site:

- **chicken biryani:** Hyderabadi Chicken Biryani first.
- **focaccia:** four focaccias.
- **macarons:** French and Chocolate Macarons.

- **chickpeas** (an ingredient): Air Fryer Chickpeas, Pasta with Chickpeas, …
- **Korean** (a cuisine): Korean dishes.
- **crème brûlée** and **creme brulee** (accents): both find Crème Brûlée.
- **fish & chips** (punctuation): four fish-and-chips recipes.
- **mac-and-cheese** (hyphens): Mac and Cheese recipes first.
- **zzqxv** (no match): "No recipes match".
- **Filters and sort:** Vegan + Desserts + quickest gives 56 recipes. The full-collection filter suite also passes (24 site checks, below).
- **Keyboard:** ArrowDown sets `aria-activedescendant`.

No Core Web Vitals claim is made.

5. Mobile and desktop checks (tested locally, Chromium)

- **Pages:** homepage, `/recipes/`, `/search/?q=chicken`, carbonara, macarons, lasagna, contact.
- **Widths:** 360, 390, 414, 768 and 1366 px.
- **Horizontal overflow:** 0 everywhere. The homepage rail scrolls sideways by design.
- **`#method` under the sticky header:** the heading lands below the 75 px header on every page and width.
- **Tap targets:** the footer links were 17 px tall and are now 24 px. The filter checkboxes are 16 px, but they sit inside full-size labels.
- **Recipe tools:** cook mode turns on; step timers are present (3 on macarons, 6 on lasagna, 3 on carbonara); servings, units, print, favourites and notes pass `tools/site-browser-test.js` (24 of 24); focus shows a 3 px outline.
- **Environment block (ads):** ads were left enabled, but their scripts could not load here. The sandbox's HTTPS proxy fails TLS for the ad and analytics hosts (`net::ERR_CERT_AUTHORITY_INVALID`). These are browser observations from a lab environment with no third-party ads loaded. They are not field data and say nothing about layout shift caused by ads.

6. Contact status

- **Live:** `{"ok":true,"configured":false}` (verified live). The form says, before anyone types, that it is not switched on, and nothing is sent.
- **DNS:** the domain still has no MX, SPF or DMARC records (checked 18 October 2026), so there is no mailbox to send from.
- **Tests:** endpoint tests 48 of 48; browser tests 14 of 14. The browser suite's first run timed out while a button was still moving; the rerun passed in full. Covered:
  - a network failure says "not sent" and keeps the typed text;
  - a 200 HTML page is not mistaken for success;
  - the no-JavaScript paths work;
  - no secret ever appears in a response.
- **Owner settings needed:** one file outside `public_html` and Git, at `domains/weeklydelight.com/private/contact-config.php`, copied from `tools/contact-config.example.php`:
  - `to`: the inbox you read;
  - `from`: a mailbox on weeklydelight.com, created in Hostinger Email, which also adds the MX, SPF and DKIM records;
  - `salt`: 16 or more random characters;

    - `transport: 'smtp';`
    - `smtp.host`, `smtp.port` and `smtp.encryption`, as Hostinger gives them for the mailbox;
    - `smtp.username` and `smtp.password`: the mailbox login, typed into the file on the server and never into chat.
- **Then:** `php tools/contact-doctor.php --config <path> --probe` logs in without sending, and `/contact/send.php?status=1` should answer `configured: true.`
- **Prepared test message, not sent:** `php tools/contact-doctor.php --config <path> --send-test` shows the single message, with the subject "Contact form test message". It goes only with `--yes`, and only after you authorise it. "Accepted for sending" will mean the mail server took it, not that it arrived; confirm by finding it in the inbox.

7. Recipes still needing review

- `consistency-review.md` lists 832 review items, each naming the exact line or step, out of 5,515 recipes:
    - 344 required waits that are untimed or too short to count;
    - 237 stage sums above the cook time, mostly overlaps or alternatives (the largest are at the top);
    - 231 ingredients the method never names;
    - 12 divided ingredients;
    - 7 time claims;
    - 1 advance preparation written into an ingredient line.
- `food-handling-review.md` lists the raw-egg dishes and three specialist cases (horchata, banoffee pie, cooling large pots).
- `src/data/testing-notes.json` lists the 26 recipes to cook first.
- Uncertainty that remains in the corrected recipes:
    - **Macarons:** the shell cooling and ganache chilling have no stated time and are not counted.
    - **Banoffee pie:** the tin's cooling time is not stated.
    - **Pasta e fagioli:** the pasta's cooking time is untimed.
    - **Dal makhani and moussaka:** the totals assume the parallel stages overlap.
- **Dates:** 49 recipes' `dateModified` moved, each one a recipe whose data changed here. `published-dates.json` is untouched. Carbonara and the other recipes that now withhold sodium changed on the page without their date moving, because the register fingerprints recipe data, not computed nutrition.

8. Owner inputs needed

1. **Contact settings** (section 6), and authorising the single test message.
2. **Raw-egg dishes:** whether to add a one-line pasteurised-egg note to the dishes listed in `food-handling-review.md`.
3. **The "Suggested order" sort:** it still uses the catalogue's typed rating × review weight. Nothing calls it popularity, and the search ranking no longer uses any rating. Replacing it with a curated order is the owner's choice.
4. **A cook for the testing register.**
5. **Exports for any traffic or indexing question.** Still none available, so no traffic or ranking claim is made.

9. Deployment and rollback

- **Not deployed.** The earlier "Deploy it on hostinger" covered the follow-up release. This release had no deployment step authorised.
- **The remaining step:**
- Merge the branch into `main` (a PR).
- Hostinger's Git auto-deploy publishes `main` into `public_html`.
- Clear the Hostinger CDN cache.
- Run `node tools/private-paths-check.js --url https://weeklydelight.com` and `curl -s https://weeklydelight.com/contact/send.php?status=1`.
- Open macarons, lasagna, carbonara and `/recipes/?q=creme%20brulee`.
- **Rollback:** `git revert -m 1 <merge commit>` on `main`, then the same redeploy and cache clear. The tag `checkpoint/pre-corrective-2026-10-18` marks the starting point.
- **The designated branch:** `claude/culinaryvault-recipe-site-mk9w9b` holds one unmerged commit from an earlier round, an audit report. It was not touched.

10. Advertising preserved

`node tools/ads-unchanged.js` reports the following unchanged from `origin/main`:

- the ad and consent source files: `src/templates/ads.js`, `src/data/ads.js`, `src/data/consent.js`, `src/data/analytics.js`, `src/assets/js/ad-loader.js`, `src/assets/js/consent.js` and `src/assets/js/analytics.js`;
- `ads.txt`;
- the ad markup on eight sample pages: 11 advertising tags each, identical.

No ad network, publisher ID, placement, social-bar script, consent or targeting setting was changed. Because advertising is unchanged, no ad-related concern (page weight, layout shift, third-party requests) is claimed as resolved. Those were outside this task.
